

Freetown Flushing Program

The Freetown Water & Sewer Commission is currently flushing the water lines in Assonet as directed by MassDEP.

This program is designed to continue to provide clean, potable water to our customers without the use of charcoal filters. The water received from the City of Fall River is safe and within all state regulated guidelines which we then pass along to our Assonet customers.

We are flushing at 5 hydrants in Assonet and they will be running continuously so don't be alarmed.

Flushing will continue until late fall and if you have any questions, please contact us at 508.644.4000.
