

Freetown Water Bleeding Program

The Freetown Water & Sewer Commission has installed permanent bleeders in Assonet as directed by MassDEP.

This program allows us to continue to provide clean, potable water to our customers without building a multimillion dollar filtration system.

The water received from the City of Fall River is safe and within all state regulated guidelines which we then pass along to our Assonet customers.

There are four permanent below grade bleeders located in Assonet and they will be running continuously through November.

If you have any questions, please contact us at 508.644.4000, ext. 5.
